Response to Amendment

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim recites "the deflectors" in line 4, there is insufficient antecedent basis for this limitation. Please amend.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Couffet et al.(U.S.Pat.5,397,877) in view of Maeyama (U.S.Pat.6,195,525). Couffet discloses a device for the homogeneous inductive heating of metallic flat products on the move that discloses many of the features of the claimed invention but fails to show magnetic deflectors. Maeyama discloses an electromagnetic induction heating device and image recording device using the same that shows using magnetic deflectors interior to an inductive heating coil. It would have been obvious to one of ordinary skill at

the time of the claimed invention to use deflectors as taught by Maeyama in the device of Couffet so as to reduce the number of required coil windings.

Response to Arguments

Applicant's arguments filed 3-28-2007 have been fully considered but they are not persuasive. Applicant's argument that Couffet does not show coils surrounding a product to be heated please consider Figs. 1 and 2 where coils 14 and 14' are on either side of object to be heated 16. Applicants argument that Macyama does not show a longitudinal flux system, a stationary deflector, inductors that surround the heated object or "two magnetic field deflectors located inside coils". Please note Macyama is only needs to show features lacking from the primary reference Couffet, namely magnetic deflectors. Macyama shows deflectors 5 and 3 inside coil 4 for the purpose of altering the magnetic field.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Leonard, Witzman, Witzman'591, Dubs, Larkin and Holcombe are cited to show structure similar to the claimed invention.
